Lodi, Bergen County, NJ  
PVSC Application  
ISRA Case No. 86009  
GEO Project No. 94039T1**

Dear Mr. Carscadden:

In follow-up to our telephone conversation, this is a request for the inspection, meeting, and other steps needed for Hexcel Corporation to obtain its final permit approval for discharge to the Passaic Valley Sewerage Commissioners (PVSC). The sewer line, pump, flow meter and all other equipment for operation of the discharge to the sewer line are now in place.

We request that the PVSC perform an inspection at its earliest convenience. The contractor that installed the sewer line and related equipment wishes to test the equipment to complete their work. However, to test the equipment they need to be able to discharge up to 3,000 gallons of treated water, over one day's time, into the sewer. Enclosed for your use is a copy of the map of the site that was submitted with the PVSC permit application; it shows the location of the sewer line and related equipment.

For your reference, the compliance schedule has been completed as follows:

- 12/4/95 to 12/6/95 - The sewer line was installed.
- 12/14/95 - A revised permit application was submitted to the PVSC, along with the Local Limit Baseline Monitoring Report and testing data.
- 1/16/96 to 1/17/96 - The pump and related equipment was installed.

We also would like the opportunity to discuss your anticipated schedule for issuance of the PVSC permit. In particular, at which commissioner's meeting do you expect this permit to be introduced?

We will await your call to schedule an inspection of the sewer line and equipment. We look forward to meeting with you thereafter.

Sincerely,

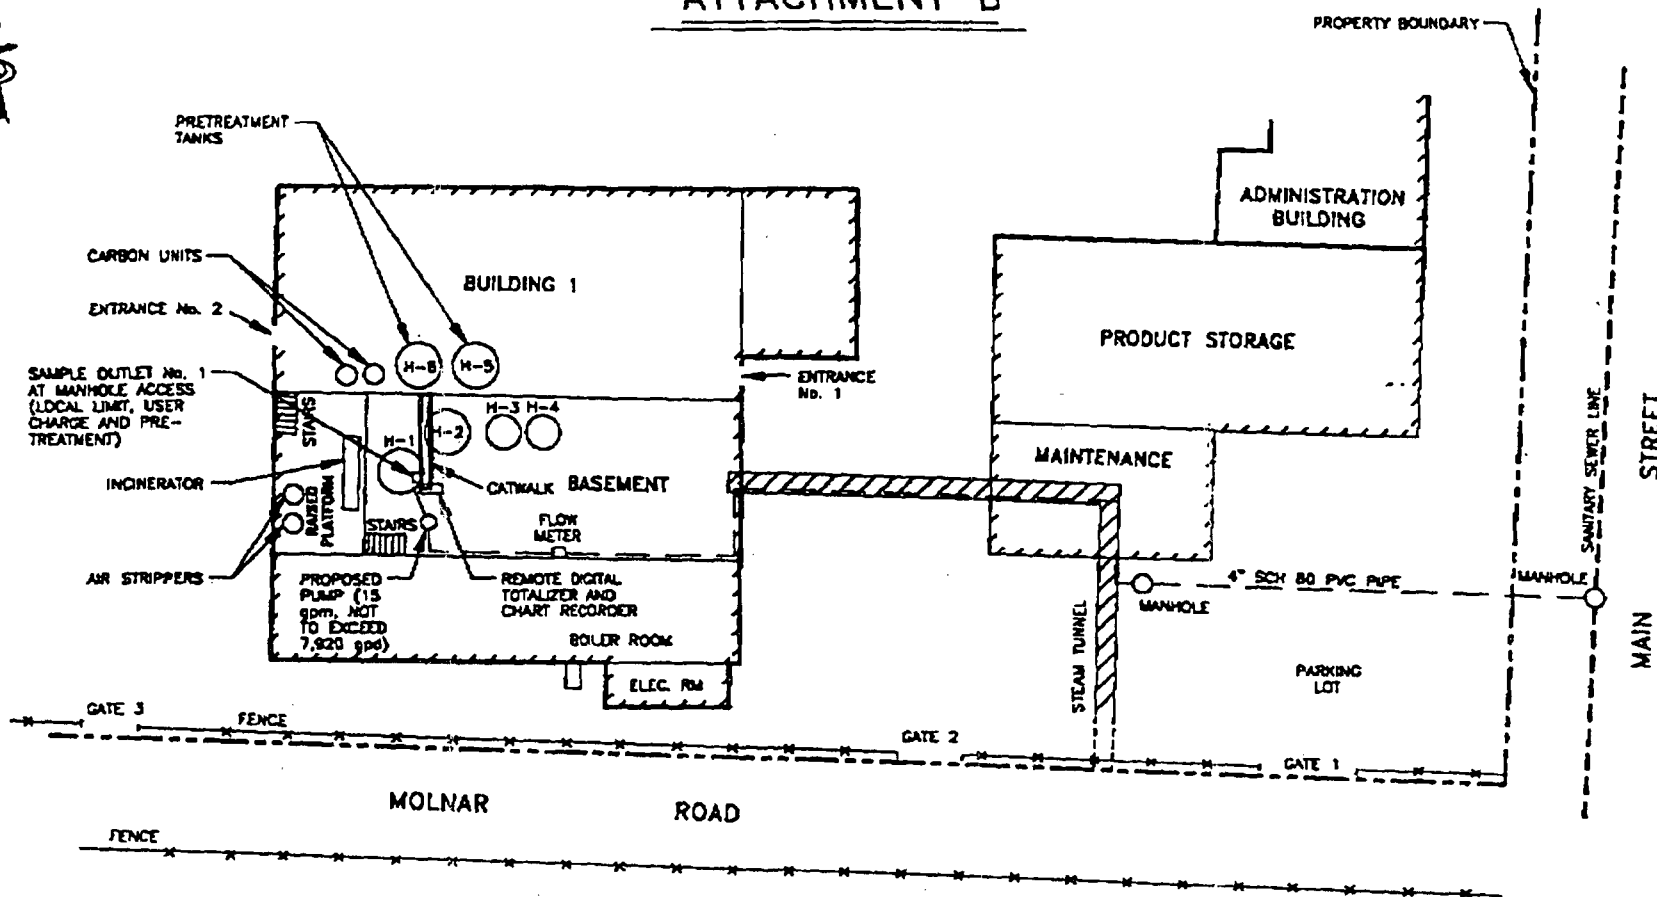

GEO ENGINEERING, INC.
